1. CORPORATE INFORMATION AND NATURE OF OPERATIONS

Sultan Minerals Inc., incorporated in British Columbia, is a public company listed on the TSX Venture Exchange ("TSX-V") and trades under the symbol SUL. The address of the Company's corporate office and its principal place of business is 1066 West Hastings Street, Suite 2000, Vancouver, British Columbia, Canada.

The Company is in the exploration stage and its principal business activity is the exploration and evaluation of mineral properties in Canada. The Company is in the process of exploring and evaluating its mineral properties and has not yet determined whether these properties contain ore reserves that are economically recoverable.

The amounts shown as mineral properties and related capitalized exploration costs represent costs net of recoveries to date, less amounts written off, and do not necessarily represent present or future values. Recoverability of the amounts shown for mineral properties is dependent upon the discovery of economically recoverable mineral reserves, securing and maintaining title and beneficial interest in the properties, the ability of the Company to obtain financing necessary to complete the exploration and development of its mineral property interests, and on future profitable production or proceeds from the disposition of the mineral property interests.

2. BASIS OF PREPARATION

a) Statement of compliance

These condensed interim financial statements are prepared in accordance with International Accounting Standard ("IAS") 34 *Interim Financial Reporting* under International Financial Reporting Standards ("IFRS") issued by the International Accounting Standards Board. These condensed interim financial statements follow the same accounting policies and methods of application as the Company's most recent annual financial statements. Accordingly, these condensed interim financial statements should be read in conjunction with our most recent annual financial statements, which were prepared in accordance with IFRS as issued by the IASB.

The condensed interim financial statements were authorized for issuance by the Board of Directors on August 28, 2012.

b) Going Concern

These interim financial statements are prepared on a going concern basis, which assumes that the Company will continue its operations for a reasonable period of time. The Company has incurred losses since its inception and had an accumulated deficit of \$17,281,838 at June 30, 2012 which has been funded primarily by issuance of shares. The Company's ability to continue its operations and to realize assets at their carrying values is dependent upon obtaining additional financing or maintaining continued support from its shareholders and creditors, and generating profitable operations in the future. The Company has been successful in the past in raising funds for operations by issuing shares but there is no assurance that it will be able to continue to do so in the future. These factors may cast significant doubt on the use of the going concern basis of accounting.

(e) Shareholder rights plan

The Company's board of directors approved the adoption of a Shareholder Rights Plan (the "Rights Plan") on June 28, 2010, and the Rights Plan will expire on June 28, 2013.

The Shareholder Rights Plan has been designed to protect shareholders from unfair, abusive or coercive take-over strategies including the acquisition of control of the Company by a bidder in a transaction or series of transactions that may not treat all shareholders fairly nor afford all shareholders an equal opportunity to share in the premium paid upon an acquisition of control. The Shareholder Rights Plan was adopted to provide the Board with sufficient time, in the event of a public take-over bid or tender offer for the common shares, to pursue alternatives which could enhance shareholder value.

This Shareholder Rights Plan is not being adopted in response to any proposal to acquire control of the Company.

The Rights will not, however, be triggered by a "Permitted Bid", which is defined as a bid which is outstanding for a minimum of 60 days made to all of the shareholders of the Company for all of their common shares and, subject to other specified conditions, is accepted by a majority of independent shareholders (as detailed in the Rights Plan).

8. FINANCIAL INSTRUMENTS (continued)

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its obligations. The Company's maximum exposure to credit risk at the balance sheet date under its financial instruments is summarized as follows:

	June 30, 2012
Accounts and other receivables -	
Currently due	\$ 21,937
Past due by 90 days or less, not impaired	-
Past due by greater than 90 days, not impaired	-
	21,937
Short-term investments	336,250
	\$ 358,187

Those financial assets that potentially subject the Company to credit risk are primarily its investment in guaranteed investment certificates companies and any receivables. The Company has increased its focus on credit risk given the impact of the current economic climate. The Company considers the risk of material loss to be significantly mitigated due to the financial strength of the major financial institutions where term deposits are held. The Company's maximum exposure to credit risk as at June 30, 2012, is the carrying value of its financial assets.

Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its obligations associated with financial liabilities. The Company has a planning and budgeting process in place by which it anticipates and determines the funds required to support normal operation requirements as well as the growth and development of its mineral property interests. The Company coordinates this planning and budgeting process with its financing activities through the capital management process described in Note 9, in normal circumstances. The Company's financial liabilities are comprised of its accounts payable and accrued liabilities and amounts due to related parties, the contractual maturities of which at June 30, 2012, are summarized as follows:

	June 30, 2012
Accounts payable and accrued liabilities with contractual maturities -	
Within 90 days or less	\$ 52,209
In later than 90 days, not later than one year	-
Due to related parties with contractual maturities

8. FINANCIAL INSTRUMENTS (continued)

Market risks

The significant market risks to which the Company is exposed include commodity price risk, interest rate risk and foreign exchange risk.

- Commodity price risk

The Company's ability to raise capital to fund exploration or evaluation activities is subject to risk associated with fluctuations in the market prices of gold, copper, zinc, lead, molybdenum and tungsten, and the outlook for these metals. The Company's ability to raise capital is affected by the prices of commodities that the Company is exploring for on its mineral property interests. The Company does not have any hedging or other derivative contracts respecting its operations.

Market prices for these metals have historically fluctuated widely and are affected by numerous factors outside of the Company's control, including, but not limited to, levels of worldwide production, short-term changes in supply and demand, industrial and retail demand, central bank lending, and forward sales by producers and speculators. The Company has elected not to actively manage its commodity price risk.

- Interest rate risk

The Company has no significant exposure at June 30, 2012, to interest rate risk through its financial instruments.

- Currency risk

Fluctuations in United States dollars would not significantly impact the operations and the values of its assets and shareholders' equity at this time. If the Company were to go into production, the Company would be subject to more foreign currency risk from fluctuations in the Canadian dollar relative to the United States dollar, due to metals prices and their denomination in United States dollars.

9. MANAGEMENT OF CAPITAL

The Company's objective in managing capital is to maintain adequate levels of funding to safeguard the Company's ability to continue as a going concern in order to pursue the development of its mineral property interests in British Columbia and to maintain a flexible capital structure which will optimize the costs of capital.

The Company endeavours to manage its capital structure in a manner that provides sufficient funding for operational activities through funds primarily secured through equity capital obtained in private placements. There can be no assurances that the Company will be able to continue raising capital in this manner.

Although the Company has been successful at raising funds in the past through the issuance of share capital, it is uncertain whether it will be able to continue this form of financing due to the current difficult conditions. The Company makes adjustments to its management of capital in the light of changes in economic conditions and the risk characteristics of its assets, seeking to limit shareholder dilution and optimize its costs of capital while maintaining an acceptable level of risk. The Company currently has sufficient funds for operations but must rely on equity financings, or forms of joint venture or other types of financing to continue exploration and development work and to meet its administrative overhead costs in future years (See Note 2b).

9. MANAGEMENT OF CAPITAL (continued)

The Company's investment policy is to invest its cash in highly liquid short-term interest-bearing investments with maturities allowing the Company to withdraw funds at intervals needed for the expected timing of expenditures in its operations.

10. COMMITMENTS

The Company's commitment for annual minimum future lease payments under the office rental agreement is as follows:
